Category: CP/CPS

Status: published

Document: CERN Certification Authority 2 Certificate
Policy and Certificate Practice Statement

Editors: Emmanuel Ormancey, Paolo Tedesco, Berk
Balci, Hannah Short

Date created: July 30, 2013 09:09

Last updated: October 12, 2026 16:14

Number of pages: 51

CERN Certification Authority 2 Certificate Policy and Certificate Practice Statement

Emmanuel Ormancey, Paolo Tedesco, Berk Balci, Hannah Short, Anders Haugen

CERN IT/PW-IAM

Version 1.0, Revision 0

Document OID: 1.3.6.1.4.1.96.10.10.2.1.1.0

Table of contents

Table of contents	3
1 Introduction.....	11
1.1 Overview	11
1.2 Document name and identification	11
1.3 PKI participants	11
1.3.1 Certification authorities	11
1.3.2 Registration authorities.....	12
1.3.3 Subscribers	12
1.3.4 Relying parties.....	12
1.3.5 Other participants	12
1.4 Certificate usage	12
1.4.1 Appropriate certificate uses.....	12
1.4.2 Prohibited certificate uses	12
1.5 Policy administration	12
1.5.1 Organization administering the document	12
1.5.2 Contact persons	13
1.5.3 Person determining CPS suitability for the policy	13
1.5.4 CPS approval procedures	13
1.6 Definitions and acronyms	13
2 Publication and repository responsibilities.....	15
2.1 Repositories	15
2.1.1 Certification Authority tools web site	15
2.1.2 Certification Authority web application (soap services)	15
2.2 Publication of certification information.....	15
2.3 Time or frequency of publication.....	15
2.4 Access controls on repositories	15
3 Identification and authentication.....	17
3.1 Naming.....	17
3.1.1 Types of names	17
3.1.2 Need for names to be meaningful	17
3.1.3 Anonymity or pseudonymity of subscribers	17
3.1.4 Rules for interpreting various name forms	17
3.1.5 Uniqueness of names.....	17
3.1.6 Recognition, authentication, and role of trademarks	17
3.2 Initial identity validation	17
3.2.1 Method to prove possession of private key.....	17
3.2.2 Authentication of organization identity.....	18
3.2.3 Authentication of individual identity	18
3.2.4 Non-verified subscriber information.....	19
3.2.5 Validation of authority	19
3.2.6 Criteria for interoperation.....	19
3.3 Identification and authentication for re-key requests	19

3.3.1	Identification and authentication for routine re-key	19
3.3.2	Identification and authentication for re-key after revocation	19
3.4	Identification and authentication for revocation request	19
4	Certificate life-cycle operational requirements	20
4.1	Certificate Application	20
4.1.1	Who can submit a certificate application	20
4.1.2	Enrolment process and responsibilities	20
4.2	Certificate application processing	21
4.2.1	Performing identification and authentication functions.....	21
4.2.2	Approval or rejection of certificate applications.....	21
4.2.3	Time to process certificate applications	21
4.3	Certificate issuance	22
4.3.1	CA actions during certificate issuance.....	22
4.3.2	Notification to subscriber by the CA of issuance of certificate	22
4.4	Certificate acceptance	22
4.4.1	Conduct constituting certificate acceptance.....	22
4.4.2	Publication of the certificate by the CA	22
4.4.3	Notification of certificate issuance by the CA to other entities	22
4.5	Key pair and certificate usage	22
4.5.1	Subscriber private key and certificate usage	22
4.5.2	Relying party public key and certificate usage	23
4.6	Certificate renewal.....	23
4.6.1	Circumstance for certificate renewal.....	23
4.6.2	Who may request renewal.....	23
4.6.3	Processing certificate renewal requests	23
4.6.4	Notification of new certificate issuance to subscriber.....	23
4.6.5	Conduct constituting acceptance of a renewal certificate.....	23
4.6.6	Publication of the renewal certificate by the CA.....	23
4.6.7	Notification of certificate issuance by the CA to other entities	23
4.7	Certificate re-key.....	23
4.7.1	Circumstance for certificate re-key.....	23
4.7.2	Who may request certification of a new public key.....	24
4.7.3	Processing certificate re-keying requests	24
4.7.4	Notification of new certificate issuance to subscriber.....	24
4.7.5	Conduct constituting acceptance of a re-keyed certificate	24
4.7.6	Publication of the re-keyed certificate by the CA	24
4.7.7	Notification of certificate issuance by the CA to other entities	24
4.8	Certificate modification	24
4.8.1	Circumstance for certificate modification.....	24
4.8.2	Who may request certificate modification	24
4.8.3	Processing certificate modification requests	24
4.8.4	Notification of new certificate issuance to subscriber.....	24
4.8.5	Conduct constituting acceptance of modified certificate	24
4.8.6	Publication of the modified certificate by the CA	24
4.8.7	Notification of certificate issuance by the CA to other entities	24
4.9	Certificate revocation and suspension.....	24

4.9.1	Circumstances for revocation	25
4.9.2	Who can request revocation.....	25
4.9.3	Procedure for revocation request.....	25
4.9.4	Revocation request grace period	25
4.9.5	Time within which CA must process the revocation request.....	26
4.9.6	Revocation checking requirement for relying parties	26
4.9.7	CRL issuance frequency (if applicable)	26
4.9.8	Maximum latency for CRLs (if applicable)	26
4.9.9	On-line revocation/status checking availability	26
4.9.10	On-line revocation checking requirements.....	26
4.9.11	Other forms of revocation advertisements available	26
4.9.12	Special requirements re-key compromise	26
4.9.13	Circumstances for suspension.....	26
4.9.14	Who can request suspension	26
4.9.15	Procedure for suspension request	26
4.9.16	Limits on suspension period.....	26
4.10	Certificate status services	26
4.10.1	Operational characteristics	27
4.10.2	Service availability.....	27
4.10.3	Optional features	27
4.11	End of subscription	27
4.12	Key escrow and recovery	27
4.12.1	Key escrow and recovery policy and practices.....	27
4.12.2	Session key encapsulation and recovery policy and practices	27
5	Facility, management and operational controls.....	28
5.1	Physical controls	28
5.1.1	Site location and construction	28
5.1.2	Physical access	28
5.1.3	Power and air conditioning.....	28
5.1.4	Water exposures	28
5.1.5	Fire prevention and protection	28
5.1.6	Media storage	28
5.1.7	Waste disposal	28
5.1.8	Off-site backup.....	28
5.2	Procedural controls.....	28
5.2.1	Trusted roles	28
5.2.2	Number of persons required per task.....	28
5.2.3	Identification and authentication for each role	28
5.2.4	Roles requiring separation of duties	28
5.3	Personnel controls	29
5.3.1	Qualifications, experience, and clearance requirements.....	29
5.3.2	Background check procedures	29
5.3.3	Training requirements.....	29
5.3.4	Retraining frequency and requirements	29
5.3.5	Job rotation frequency and sequence.....	29
5.3.6	Sanctions for unauthorized actions.....	29

5.3.7	Independent contractor requirements	29
5.3.8	Documentation supplied to personnel	29
5.4	Audit logging procedures	29
5.4.1	Types of events recorded	29
5.4.2	Frequency of processing log.....	30
5.4.3	Retention period for audit log.....	30
5.4.4	Protection of audit log	30
5.4.5	Audit log backup procedures	30
5.4.6	Audit collection system (internal vs. external).....	30
5.4.7	Notification to event-causing subject	30
5.4.8	Vulnerability assessments.....	30
5.5	Records archival	30
5.5.1	Types of records archives.....	30
5.5.2	Retention period for archive	30
5.5.3	Protection of archive.....	30
5.5.4	Archive backup procedures.....	30
5.5.5	Requirements for time-stamping of records.....	30
5.5.6	Archive collection system (internal or external)	30
5.5.7	Procedures to obtain and verify archive information	30
5.6	Key changeover	31
5.7	Compromise and disaster recovery	31
5.7.1	Incident and compromise handling procedures	31
5.7.2	Computing resources, software, and/or data are corrupted	31
5.7.3	Entity private key compromise procedures	31
5.7.4	Business continuity capabilities after a disaster	31
5.8	CA or RA termination	31
6	Technical security controls	33
6.1	Key pair generation and installation	33
6.1.1	Key pair generation	33
6.1.2	Private key delivery to subscriber	33
6.1.3	Public key delivery to certificate issuer.....	33
6.1.4	CA public key delivery to relying parties	33
6.1.5	Key sizes	33
6.1.6	Public key parameters generation and quality checking	33
6.1.7	Key usage purposes (as per X.509 v3 key usage field)	33
6.2	Private Key Protection and Cryptographic Module Engineering Controls	34
6.2.1	Cryptographic module standards and controls.....	34
6.2.2	Private key (n out of m) multi-person control.....	34
6.2.3	Private key escrow	34
6.2.4	Private key backup	34
6.2.5	Private key archival	34
6.2.6	Private key transfer into or from a cryptographic module	34
6.2.7	Private key storage on cryptographic module	34
6.2.8	Method of activating private key	34
6.2.9	Method of deactivating private key.....	34
6.2.10	Method of destroying private key.....	34

6.2.11	Cryptographic Module Rating	34
6.3	Other aspects of key pair management	35
6.3.1	Public key archival	35
6.3.2	Certificate operational periods and key pair usage periods	35
6.4	Activation data	35
6.4.1	Activation data generation and installation	35
6.4.2	Activation data protection	35
6.4.3	Other aspects of activation data	35
6.5	Computer security controls.....	35
6.5.1	Specific computer security technical requirements.....	35
6.5.2	Computer security rating	35
6.6	Life cycle technical controls	35
6.6.1	System development controls	35
6.6.2	Security management controls	35
6.6.3	Life cycle security controls	35
6.7	Network security controls.....	35
6.8	Time-stamping	37
7	Certificate, CRL, and OCSP profiles	38
7.1	Certificate profile	38
7.1.1	Version number(s).....	38
7.1.2	Certificate extensions.....	38
7.1.3	Algorithm object identifiers	39
7.1.4	Name forms.....	39
7.1.5	Name constraints	39
7.1.6	Certificate policy object identifier	39
7.1.7	Usage of Policy Constraints extension	39
7.1.8	Policy qualifiers syntax and semantics	39
7.1.9	Processing semantics for the critical Certificate Policies extension.....	39
7.2	CRL profile	40
7.2.1	Version number(s).....	40
7.2.2	CRL and CRL entry extensions	40
7.3	OCSP profile	40
7.3.1	OCSP Version.....	40
8	Compliance audit and other assessments.....	41
8.1	Frequency or circumstances of assessment.....	41
8.2	Identity/qualifications of assessor	41
8.3	Assessor's relationship to assessed entity	41
8.4	Topics covered by assessment	41
8.5	Actions taken as a result of deficiency	41
8.6	Communication of results.....	41
9	Other business and legal matters	42
9.1	Fees	42
9.1.1	Certificate issuance or renewal fees	42
9.1.2	Certificate access fees	42
9.1.3	Revocation or status information access fees.....	42
9.1.4	Fees for other services	42

9.1.5	Refund policy	42
9.2	Financial responsibility.....	42
9.2.1	Insurance coverage	42
9.2.2	Other assets	42
9.2.3	Insurance or warranty coverage for end-entities	42
9.3	Confidentiality of business information	42
9.3.1	Scope of confidential information.....	42
9.3.2	Information not within the scope of confidential information	42
9.3.3	Responsibility to protect confidential information	42
9.4	Privacy of personal information.....	42
9.4.1	Privacy plan	42
9.4.2	Information treated as private.....	43
9.4.3	Information not deemed private	43
9.4.4	Responsibility to protect private information.....	43
9.4.5	Notice and consent to use private information	43
9.4.6	Disclosure pursuant to judicial or administrative process	43
9.4.7	Other information disclosure circumstances	43
9.5	Intellectual property rights	43
9.6	Representations and warranties.....	43
9.6.1	CA representations and warranties	43
9.6.2	RA representations and warranties	43
9.6.3	Subscriber representations and warranties	43
9.6.4	Relying party representations and warranties.....	43
9.6.5	Representations and warranties of other participants	43
9.7	Disclaimers of warranties.....	43
9.8	Limitations of liability.....	44
9.9	Indemnities	44
9.10	Term and termination	44
9.10.1	Term	44
9.10.2	Termination.....	44
9.10.3	Effect of termination and survival.....	44
9.11	Individual notices and communications with participants	44
9.12	Amendments.....	45
9.12.1	Procedure for amendment.....	45
9.12.2	Notification mechanism and period.....	45
9.12.3	Circumstances under which OID must be changed.....	45
9.13	Dispute resolution provisions	45
9.14	Governing law	45
9.15	Compliance with applicable law.....	45
9.16	Miscellaneous provisions	45
9.16.1	Entire agreement	45
9.16.2	Assignment.....	45
9.16.3	Severability.....	45
9.16.4	Enforcement (attorneys' fees and waiver of rights).....	46
9.16.5	Force Majeure	46
9.17	Other provisions.....	46

10	Types of Certificates Issued by the CERN CA	47
10.1	Certificates for General Usage	47
10.1.1	EESmartCard User	47
10.1.2	CERN Host Certificate 2 Years	47
10.1.3	CERN EduRoam Certificate	48
10.1.4	CERN Code Signing Certificate	48
10.2	Certificates for Specific Usage.....	49
10.2.1	Domain Controller Certificate	49
10.2.2	CERN STS User Certificate	49
10.2.3	CERN Enrollment Agent	50
11	Bibliography	51

1 Introduction

1.1 Overview

The European Organization for Nuclear Research (CERN) is an intergovernmental organization having its seat in Geneva, Switzerland¹.

This document is the combined Certificate Policy and Certification Practice Statement of the CERN certification authority capable of issuing certificates for internal CERN usage using the SHA-512 algorithm.

The certification authority will be referred to as “CERN Certification Authority” in the rest of this document.

This document describes the set of procedures followed by the CERN Certification Authority.

This document is structured according to RFC 3647². The latter does not form part of this document and only the information provided in this document may be relied on.

1.2 Document name and identification

This document is named *CERN Certification Authority 2 Certificate Policy and Certificate Practice Statement*. The following ASN.1 Object Identifier (OID) has been assigned to this document: 1.3.6.1.4.1.96.10.10.2.1.1.0

This OID is constructed as shown in the table below:

IANA	1.3.6.1.4.1
CERN	.96
CERN CA	.10
CERN Certification Authority 2	.10
Documents	.2
CA CP-CPS	.1
Major Version	.1
Minor Version	.0

1.3 PKI participants

1.3.1 Certification authorities

The CERN Certification Authority provides PKI services to CERN Organization users; it does not issue certificates to subordinate Certification Authorities. Its certification relies on CERN Root Certification Authority 2 (CP/CPS document 1.3.6.1.4.1.96.10.8.2.1.1.0, available on web site <http://cafiles.cern.ch/cafiles>).

1.3.2 Registration authorities

The CERN Certification Authority delegates the authentication of individual identity to Registration Authorities (CERN RA). Depending on the nature of a person's association with CERN this could be any one of 3 services:

- For members of personnel, as defined in Administrative Circular 11³, except for Unpaid Associates and USERS, registration is carried out by the HR Department.
- For Unpaid Associates and USERS it is carried out by the CERN Users Office.
- For the staff of CERN contractors it is carried out by the Registration Service.

These services complete and validate the data in the CERN HR database after various identity checks. Each person is assigned a status, classifying their relationship with CERN.

1.3.3 Subscribers

The CERN Certification Authority issues certificates to:

- Persons (user certificates)
- Computers and services (host certificates)
- Service accounts (user certificates)

The entities eligible for certification by the CERN Certification Authority are:

- CERN users: people with a valid registration in the CERN HR database.
- CERN computers: computers registered in the CERN computer central database.
- CERN service accounts.

1.3.4 Relying parties

Relying parties are individuals or organizations using the certificates to verify the identity of subscribers and to secure communication with this subscriber. Relying parties may or may not be subscribers within this CA.

1.3.5 Other participants

No stipulation.

1.4 Certificate usage

1.4.1 Appropriate certificate uses

Certificates issued within the scope of this CP may be used by subscribers for purposes of authentication, digital signature and data encryption.

1.4.2 Prohibited certificate uses

Any certificate use is permissible only if the limitations in the registration process and therefore the restrictions on the liability are accepted for the intended purpose.

1.5 Policy administration

1.5.1 Organization administering the document

CERN - European Organization for Nuclear Research

Policy Management Authority (PMA)

CH-1211 Geneva

Switzerland

Tel: +41 22 767 6111

<http://www.cern.ch> , <https://www.cern.ch/ca>

1.5.2 Contact persons

Antonio Nappi

CERN – IT/PW

Tel: :+41754116733

antonio.nappi@cern.ch

Berk Balci

CERN – IT/PW

Tel: +41227662716

berk.balci@cern.ch

A mailing list containing CERN CA Managers has been setup to ensure quick response:

cern-ca-managers@cern.ch

1.5.3 Person determining CPS suitability for the policy

CERN CA Managers (see 1.5.2) determine CPS suitability for the policy.

1.5.4 CPS approval procedures

This document is not subject to any approval procedure.

1.6 Definitions and acronyms

The following definitions and associated abbreviations are used in this document:

CERN status	Classification of a person's relationship with CERN. Examples are STAFF, USER, UPAS (unpaid associate), ENTC (employee of a CERN contractor)
CERN user	A person registered in the CERN HR database with an active status.

CERN USER	(Note the uppercase USER). A CERN user registered with the status “USER” in the CERN HR database. This status corresponds to people employed by an external institute who are participating in a CERN experiment.
Certificate	Equivalent to Public Key Certificate.
Certification Authority (CA)	An entity trusted by one or more users to create and assign public key certificates and be responsible for them during their whole lifetime.
Certificate Policy (CP)	A named set of rules that indicates the applicability of a certificate to a particular community and/or class of application with common security requirements.
Certification Practice Statement (CPS)	A statement of the practices which a certification authority employs in issuing certificates.
Certificate Revocation List (CRL)	A time stamped list identifying revoked certificates which is signed by a CA and made freely available in a public repository.
Public Key Certificate	A data structure containing the public key of an end entity and some other information, which is digitally signed with the private key of the CA which issued it.
Policy Management Authority (PMA)	An entity establishing requirements and best practices for Public Key Infrastructures.
Registration Authority (RA)	An entity that is responsible for identification of the end entity, but that does not sign or issue certificates (i.e. an RA is delegated certain tasks on behalf of a CA). In this document the term “CERN RA” is equivalent to RA.

2 Publication and repository responsibilities

2.1 Repositories

2.1.1 Certification Authority tools web site

The tools to use the services provided by the CERN Certification Authority are provided through a website at the following address: <http://cernca.cern.ch/cernca>

The website can be accessed securely (using one of the secure application-layer protocols) with a web-browser by CERN users (as defined in 1.3.3).

The site is accessible with any browser, but the services provided vary with the browser and the operating system being used. The details on browser support are published in one of the sections of the help pages on the website.

2.1.2 Certification Authority web application (soap services)

A web application, available at the address <http://cernca.cern.ch/cernca-services/>, provides programmatic access to functionalities related to the CERN Certification Authority.

The web service interfaces allow requesting certificates and configure user or machine settings related to certificate permissions.

Documentation for the single interfaces is provided at the application site itself.

2.2 Publication of certification information

The files and information required to use the services provided by the CERN Certification Authority are provided through a website at the following address:
<http://cafiles.cern.ch/cafiles>

The files distributed through this site include:

- Certificates of the root and intermediate certification authorities
- Certificate revocation lists (CRLs) of the root and intermediate certification authorities
- All past and current versions of the CP-CPS documents of the root and intermediate certification authorities

2.3 Time or frequency of publication

- Full CRL is published every week.
- A delta CRL is published every day, and after each request of revocation of a certificate for security reasons.
- New versions of CP/CPS are published as soon as they have been approved.

2.4 Access controls on repositories

- CRL, CP and CPS for the CERN Certification Authority are available to the public as read-only information from the web site: <http://cafiles.cern.ch/cafiles>.

- CRL updates are fully automated and under the control of the CERN Certification Authority.
- Modification of CP and CPS is only allowed to CERN employees with proper authorization by CERN CA Managers.

3 Identification and authentication

3.1 Naming

3.1.1 Types of names

The subject name in certificates issued by this CA is a X.500 distinguished name (DN).

The form of the DN depends on the type of certificate.

3.1.2 Need for names to be meaningful

The Subject Name in a certificate must have a reasonable association with the authenticated name of the subscriber: it contains a unique ID of the user to ensure uniqueness.

For host certificates, the CN must be stated as the fully qualified domain name (FQDN) of the host, preceded by the optional service name.

For robot certificates, the very first CN must start with "Robot:" and should include the full name of robot's requestor OR a reasonable description of the robot. In the latter case an additional component E must include an email address that will be used to contact the team responsible for the robot.

3.1.3 Anonymity or pseudonymity of subscribers

Subscribers must not be anonymous or pseudonymous. The CERN RA validates identity of subscribers.

3.1.4 Rules for interpreting various name forms

Many languages have special characters that are not supported by the ASCII character set used to define the subject in the certificate. To work around this problem local substitution rules can be used:

- In general national characters are represented by their ASCII equivalent. E.g. é, è, à, ç are represented by e, e, a, c.
- The German "umlaut" characters may receive special treatment: ä, ö, ü are represented by either ae, oe, ue or a, o, u.

3.1.5 Uniqueness of names

The Subject Name included in the CN part of a certificate must be unique for all certificates issued by the CERN Certification Authority. The login name is given to user during CERN User registration process.

This login name is then reserved and cannot be reused after user account closure or deletion.

3.1.6 Recognition, authentication, and role of trademarks

No stipulation.

3.2 Initial identity validation

3.2.1 Method to prove possession of private key

For user certificates, requests can be submitted in two ways:

- User certificate requests can be submitted by an online procedure on the CERN Certification Authority secure website (<http://cernca.cern.ch/cernca>), using a web browser. The key pairs are generated by the web browser locally on the user's machine. The certificate (public key signed by the CA) can only be downloaded using the same browser, including the key pair, on the same machine, by a secure URL on the CERN Certification Authority website.
- Users create their key pairs and certificate request files in PKCS#10⁴ format using *OpenSSL* package⁵, submit certificate request files to the CERN Certification Authority secure website (<http://cernca.cern.ch/cernca>). The private key is kept by the user. The certificate can be downloaded using a browser by a secure URL on the CERN Certification Authority website.

For host or service certificates, requests can be submitted in two ways:

- The host or service administrator creates key pair and certificate request file in PKCS#10⁴ format using *OpenSSL* package⁵, submits certificate request file to the CERN Certification Authority secure website (<http://cernca.cern.ch/cernca>). The private key is kept by the host or service administrator. The certificate can be downloaded using a browser by a secure URL on the CERN Certification Authority website.
- The host or service administrator creates a key pair and a certificate request file in PKCS#10⁴ format using *OpenSSL* package⁵, submits certificate request file to the CERN Certification Authority through a secure web application (<http://cernca.cern.ch/cernca-services/>). The private key is kept by the host or service administrator. The certificate is returned by the web application after a successful request.

For robot certificates, requests can be submitted in one way:

- The requestor of a robot certificate generates key pair and certificate request file in PKCS#10 format using *OpenSSL* package, submits certificate request file to the CERN Certification Authority secure website (<http://cernca.cern.ch/cernca>) using special service account credentials (See clause 4.1.1). The certificate can be downloaded using a browser by a secure URL on the CERN Certification Authority website.

3.2.2 Authentication of organization identity

No stipulation.

3.2.3 Authentication of individual identity

Certificates are issued only to CERN users with a status for which the registration process requires that they present themselves physically at the appropriate registration service.

- The user is required to present their ID card or Passport and this is checked against the data in the CERN HR database.

- On initial registration, in order to get an access card, they are required to present their passport for checking before their photograph is taken for incorporation in their access card.
- The period of validity of the access card depends on the status of the person and the termination date of their contract/registration. The maximum validity period is five years and the holder must present themselves in person to get it renewed.

3.2.4 Non-verified subscriber information

None.

3.2.5 Validation of authority

No stipulation.

3.2.6 Criteria for interoperation

No stipulation.

3.3 Identification and authentication for re-key requests

3.3.1 Identification and authentication for routine re-key

Expiration warnings are sent to subscribers before re-key time. Re-key must be executed directly on the CERN Certification Authority secure website (<http://cernca.cern.ch/cernca>), after classic authentication with credentials or certificate authentication.

Re-key after expiration is not possible, and the user has to request a new certificate.

3.3.2 Identification and authentication for re-key after revocation

A revoked certificate cannot be renewed; user has to request a new certificate.

3.4 Identification and authentication for revocation request

Revocation requests can be executed directly on the CERN Certification Authority secure website (<http://cernca.cern.ch/cernca>), after classic authentication with credentials or certificate authentication.

4 Certificate life-cycle operational requirements

4.1 Certificate Application

4.1.1 Who can submit a certificate application

To request a **user certificate** a user must:

- Be registered in CERN's central HR database, with one of the categories for which physical presence at the appropriate registration service is required (see section 3.2.3)
 - Members of Personnel as defined in Administrative Circular 11 (status: STAF, FELL, PDAS, PJAS, USAS, CASS, UPAS, USER, DOCT, TECH, ADMI, SUMM, CHIL, APPR, COAS, GPRO, VISC, TRNE)
 - Employee of a CERN contractor (status: ENTC)
 - Participant to an experiment (status: PART)
 - Honorary members (status: EXTN with reason HONO)
- Have a CERN computer account and register an email address.

To request a **host certificate** a user must:

- Be registered in CERN's central network database (LANBD) as administrator or responsible of the computer, or be member of the group declared as responsible of the computer in LANDB
- Own a valid user or robot certificate.

To request a **robot certificate** a user must:

- Be the owner of a special CERN Service Account
 - The list of service accounts that are eligible to get a robot certificate is defined by CERN CA staff and is stored in an LDAP-based store
- For the robot account to be granted permission to request a robot certificate, the owner of the account must send a request by email to the CERN CA staff (email address is defined in section 1.5.2)
 - The email request must be signed with a CERN personal certificate
 - The request must contain a description of the robot compliant with the Guidelines on Approved Robots⁶.
- After this request is successfully validated, the requestor will be able to submit a certificate request as defined in 3.2.1.

4.1.2 Enrolment process and responsibilities

Certificate requests are submitted using an online procedure on CERN Certification Authority secure website (<http://cernca.cern.ch/cernca>), using a web browser or to a secure API on CERN Certification Authority web application (<http://cernca.cern.ch/cernca-services/>), in certain cases using an automated interface.

The user authenticates with the credentials given by the CERN computer registration, or using the user or robot certificate. Authentication using a user certificate is mandatory to request a host certificate through CERN Certification Authority website.

If the request is performed through the CERN Certification Authority website, the requester's birth date will be requested, as second authentication factor, for certificate issuing and renewal.

4.2 Certificate application processing

4.2.1 Performing identification and authentication functions

Certificate for a user:

- The user must have a CERN computer account with valid credentials in order to authenticate to the CERN Certification Authority secure website (<http://cernca.cern.ch/cernca>) and request a user certificate.
- Once authenticated, their identity will be checked against the HR database to determine if they are eligible for a certificate as defined in section 4.1.1

Certificate for a host:

- Host certificates can only be requested by the administrator or a responsible for the particular host, as declared in CERN network database (LANDB).
- The requester must either
 - Already have a valid personal CERN CA certificate, required to authenticate on CERN Certification Authority secure website and request host certificate
 - Already have a valid personal or robot certificate, required to authenticate on CERN Certification Authority secure web application.

Certificate for a robot:

- The user must have a CERN computer account with valid credentials and CERN service account in order to authenticate to the CERN Certification Authority secure website (<http://cernca.cern.ch/cernca>) and request a user certificate.
- Once authenticated, their identity will be checked against the membership in a list of eligible service accounts to determine if they are eligible for a certificate as defined in section 4.1.1.

4.2.2 Approval or rejection of certificate applications

Provided the user is registered in the CERN HR database with a valid status as defined in section 4.1.1, certificate issuing is allowed.

4.2.3 Time to process certificate applications

Certificate issuing and processing is done instantly: identity verification has been made previously by the CERN RA, and is mandatory to proceed with the request for a certificate.

4.3 Certificate issuance

4.3.1 CA actions during certificate issuance

No stipulation.

4.3.2 Notification to subscriber by the CA of issuance of certificate

Certificate request is done using CERN Certification Authority secure website, in a wizard form or using CERN Certification Authority web application providing an interface to a secure API for scripted certificate application processing. The last step of the wizard provides a link to download the issued certificate. Web application delivers the certificate in a text output securely sent to the requester.

4.4 Certificate acceptance

4.4.1 Conduct constituting certificate acceptance

No stipulation.

4.4.2 Publication of the certificate by the CA

User Certificates are published to CERN internal Microsoft Active Directory service, to allow authentication on various CERN websites and applications.

User Certificates are also published in CERN internal Exchange Mail Server address book: Certificate can be used to encrypt mails.

4.4.3 Notification of certificate issuance by the CA to other entities

No stipulation.

4.5 Key pair and certificate usage

4.5.1 Subscriber private key and certificate usage

By accepting the certificate the subscriber assures all participants of the CERN Certification Authority and all parties relying on the trustworthiness of the information contained in the certificate that:

- a basic understanding exists of the use and purpose of certificates,
- all data and statements given by the subscriber with relation to the information contained in the certificate are truthful and accurate,
- the private key will be maintained in a safe and secure manner,
- no unauthorized person has or will ever have access to the private key,
- the certificate will solely and exclusively be put to such uses as are in accordance with this Certificate Policy,
- immediate action will be undertaken on the subscriber's part to revoke the certificate if information in the certificate no longer proves to be correct or if the private key is missing, stolen, or is in any other way compromised.

4.5.2 Relying party public key and certificate usage

Every person using a certificate issued within the framework of this CP for verification signature or for purposes of authentication or encryption

- must verify the validity of the certificate before using it,
- must use the certificate solely and exclusively for authorized and legal purposes accordance with this CP, and
- should have a basic understanding of the use and purpose of certificates.

4.6 Certificate renewal

Renewal of certification involves the issuance of a new certificate to the subscriber by the CERN Certification Authority with a new key pair. CERN Certification Authority doesn't permit renewal without re-key.

4.6.1 Circumstance for certificate renewal

Application for certificate renewal can only be made if the certificate has not reached the end of its validity period, and has not been revoked.

4.6.2 Who may request renewal

Renewal of a certificate must always be requested by the subscriber.

4.6.3 Processing certificate renewal requests

The processing of certificate renewal requests is conducted in accordance with the provisions of section 4.3. The provisions of section 3.3.1 govern the procedures for identification and authentication for certificate renewal.

4.6.4 Notification of new certificate issuance to subscriber

The provisions of section 4.3.2 apply.

4.6.5 Conduct constituting acceptance of a renewal certificate

The provisions of section 4.4.1 apply.

4.6.6 Publication of the renewal certificate by the CA

The provisions of section 4.4.2 apply.

4.6.7 Notification of certificate issuance by the CA to other entities

The provisions of section 4.4.3 apply.

4.7 Certificate re-key

Basically, the provisions of section 4.6 apply here. However, in the case of a re-key a new key pair will be used.

CERN Certification Authority enforces re-key at least once a year.

4.7.1 Circumstance for certificate re-key

The provisions of section 4.6.1 apply.

4.7.2 Who may request certification of a new public key

The provisions of section 4.6.2 apply.

4.7.3 Processing certificate re-keying requests

The provisions of section 4.6.13 apply.

4.7.4 Notification of new certificate issuance to subscriber

The provisions of section 4.6.4 apply.

4.7.5 Conduct constituting acceptance of a re-keyed certificate

The provisions of section 4.6.5 apply.

4.7.6 Publication of the re-keyed certificate by the CA

The provisions of section 4.6.6 apply.

4.7.7 Notification of certificate issuance by the CA to other entities

The provisions of section 4.6.7 apply.

4.8 Certificate modification

Certificates must not be modified. In case of changes, the old certificate must be revoked, and a new certificate must be requested.

4.8.1 Circumstance for certificate modification

No stipulation.

4.8.2 Who may request certificate modification

No stipulation.

4.8.3 Processing certificate modification requests

No stipulation.

4.8.4 Notification of new certificate issuance to subscriber

No stipulation.

4.8.5 Conduct constituting acceptance of modified certificate

No stipulation.

4.8.6 Publication of the modified certificate by the CA

No stipulation.

4.8.7 Notification of certificate issuance by the CA to other entities

No stipulation.

4.9 Certificate revocation and suspension

This section explains the circumstances under which a certificate should be revoked. No provision is made for the suspension (temporary invalidity) of certificates. Once a certificate has been revoked, it may not be renewed or extended.

4.9.1 Circumstances for revocation

Certificates must be revoked by the CERN Certification Authority should at least one of the following circumstances be known:

- A certificate contains data that is no longer valid.
- The private key of a subscriber has been changed, lost, stolen, published or compromised and/or misused in any other manner.
- The subscriber has lost the grounds for entitlement.
- The subscriber does not comply with the terms and conditions of the CP.
- The CERN Certification Authority or RA does not comply with the terms and conditions of the CP or the CPS.
- The certification service is discontinued.
- The CERN Certification Authority private key is compromised.

Certificates may be revoked by the CERN Certification Authority should at least one of the following circumstances be known:

- The subscriber no longer needs a certificate.

4.9.2 Who can request revocation

Any subscriber may request the CERN Certification Authority to revoke their certificate. The subscriber must choose a revocation reason among the following:

- Certificate superseded: the certificate is no longer needed.
- Security reasons: the certificate is known or suspected to be compromised. If this option is chosen, the requester will also need to provide a brief description of the security incident, which will be submitted to the CERN Computer Security Team to evaluate the security risk for the CERN computing infrastructure.

Acceptance of a revocation request of a certificate is conditional on the successful identification and authentication of the subscriber in accordance with section 3.4.

The CERN RA is also allowed to ask a certificate revocation from CERN CA Staff, in case of compromise of a key.

The CERN CA staff can revoke any certificate for security reasons.

4.9.3 Procedure for revocation request

If the conditions to acceptance of the request (see section 4.9.2) are met, the certificate will be revoked.

4.9.4 Revocation request grace period

Should circumstances for revocation of a certificate exist (see section 4.9.1), the subscriber is obliged to notify the CERN Certification Authority immediately of the same, and to initiate revocation of the certificate.

4.9.5 Time within which CA must process the revocation request

The CERN Certification Authority will process a request for revocation of a certificate instantly if the conditions to acceptance of the request (see section 4.9.2) are met.

4.9.6 Revocation checking requirement for relying parties

The provisions of section 4.5.2 apply.

4.9.7 CRL issuance frequency (if applicable)

The provisions of section 0 apply.

4.9.8 Maximum latency for CRLs (if applicable)

The provisions of section 0 apply.

4.9.9 On-line revocation/status checking availability

CERN Certification Authority provides an on-line procedure where the validity of the user's certificate can be verified, by simply login in the CERN Certification Authority Web Site located at <http://cernca.cern.ch/cernca> and clicking "*Certificate Authentication [details]*" link. This procedure shows the current user certificate status.

Revocation can be requested online on CERN Certification Authority Web site at <http://cernca.cern.ch/cernca> by the user themselves.

CRLs are available from the URL given in the associated CPS section 2.1.

4.9.10 On-line revocation checking requirements

Prior to every usage of the certificate, its validity should be checked. The relevant standards are given in section 7.2 (CRL Profile) and section 7.3 (OCSP Profile) of the CPS.

4.9.11 Other forms of revocation advertisements available

Currently no other forms of revocation advertisements are available.

4.9.12 Special requirements re-key compromise

Should a private key become compromised, the certificate so affected shall immediately be revoked. Should the private key of the CERN Certification Authority become compromised, all certificates issued by the CERN Certification Authority shall be revoked.

4.9.13 Circumstances for suspension

Suspension of certificates is not supported.

4.9.14 Who can request suspension

Not applicable.

4.9.15 Procedure for suspension request

Not applicable.

4.9.16 Limits on suspension period

Not applicable.

4.10 Certificate status services

An Online Certificate Status Protocol service is available at <http://ocsp.cern.ch/ocsp>.

4.10.1 Operational characteristics

The service is provided through the Microsoft Online Responder and Web Proxy Cache services, standard components of Microsoft's PKI infrastructure in Windows Server 2022.

4.10.2 Service availability

The service is currently installed on a single server, and should be permanently available except during server maintenance operations.

High availability will be provided, if needed, configuring the service in a clustered configuration with additional servers.

4.10.3 Optional features

No optional features are available.

4.11 End of subscription

The term of the contractual relationship is given by the period of validity as indicated in the certificate.

The minimum period for the archiving of documents and certificates corresponds to the period of validity of the certificate of the CERN Certification Authority with the addition of a further period of one year.

4.12 Key escrow and recovery

The CERN Certification Authority does not support key escrow and recovery.

4.12.1 Key escrow and recovery policy and practices

Not applicable.

4.12.2 Session key encapsulation and recovery policy and practices

Not applicable.

5 Facility, management and operational controls

5.1 Physical controls

5.1.1 Site location and construction

The CERN Certification Authority is hosted in CERN Computer Center.

5.1.2 Physical access

Physical access to CERN Certification Authority is restricted to authorized personnel of the CERN CA.

5.1.3 Power and air conditioning

The critical CERN Certification Authority equipment is connected to uninterrupted power supply units, and CERN Computer Center is running uninterrupted air conditioners.

5.1.4 Water exposures

No floods are expected in CERN Computer Center.

5.1.5 Fire prevention and protection

CERN Computer Center is equipped with various smoke and fire detectors.

5.1.6 Media storage

Backup copies of CA related information are kept on secure document storage hosted at CERN. Removable media are stored in a secure location.

5.1.7 Waste disposal

All CERN Certification Authority paper waste MUST be shredded. Electronic media MUST be physically/mechanically destroyed before disposal.

5.1.8 Off-site backup

No off-site backups are currently performed.

5.2 Procedural controls

5.2.1 Trusted roles

No stipulation.

5.2.2 Number of persons required per task

One CERN CA staff only is required.

5.2.3 Identification and authentication for each role

No stipulation.

5.2.4 Roles requiring separation of duties

No stipulation.

5.3 Personnel controls

5.3.1 Qualifications, experience, and clearance requirements

The role of the CA requires a suitably trained person that is familiar with the importance of a PKI, and who is technically and professionally competent. There are no background checks or clearance procedures for trusted or other roles.

5.3.2 Background check procedures

No stipulation.

5.3.3 Training requirements

Internal training is given to CERN CA and RA operators.

5.3.4 Retraining frequency and requirements

No stipulation.

5.3.5 Job rotation frequency and sequence

No stipulation.

5.3.6 Sanctions for unauthorized actions

No stipulation.

5.3.7 Independent contractor requirements

No stipulation.

5.3.8 Documentation supplied to personnel

Personnel assigned to the CA operation have access to a restricted part of the CERN Certification Authority website where all operational procedures can be found, as well as this document.

5.4 Audit logging procedures

5.4.1 Types of events recorded

The following events are recorded in the CA log:

- Backup and restore the CA database
- Change CA configuration
- Change CA security settings
- Issue and manage certificate requests
- Revoke certificates and publish CRLs
- Store and retrieve archives keys

The following events are recorded in the server log:

- Login/Logout

- Reboot

5.4.2 Frequency of processing log

Log is 300MB size, and is automatically archived to a file when 100% full.

5.4.3 Retention period for audit log

Logs are kept in the CERN Monitoring infrastructure for 13 months. The first month is accessible via OpenSearch, the rest via HDFS.

5.4.4 Protection of audit log

Audit logs are only accessible to the administrators of CERN CA, authorized windows server managers and to authorized audit personnel.

5.4.5 Audit log backup procedures

Audits are backed up on HDFS.

5.4.6 Audit collection system (internal vs. external)

Audit collection is internal to CERN CA service.

5.4.7 Notification to event-causing subject

No stipulation.

5.4.8 Vulnerability assessments

CERN CA is constantly (24x7) monitored and all attempts to gain unauthorized access to any of the services are logged and analyzed.

5.5 Records archival

5.5.1 Types of records archives

The provisions of section 5.4.1 apply.

5.5.2 Retention period for archive

The minimum retention period is 3 years.

5.5.3 Protection of archive

The records archived is accessible to CERN CA personnel only.

5.5.4 Archive backup procedures

Records are archived on server backups.

5.5.5 Requirements for time-stamping of records

All records are saved with an automatically generated time stamp.

5.5.6 Archive collection system (internal or external)

Archiving system is CERN internal.

5.5.7 Procedures to obtain and verify archive information

No stipulation.

5.6 Key changeover

As the key generation is done by each entity (using a Web Browser or *OpenSSL* package⁵) for their own use, no provision is made for a key changeover.

5.7 Compromise and disaster recovery

5.7.1 Incident and compromise handling procedures

- If the keys of an end entity are lost or compromised, the CERN RA must be informed immediately in order to revoke the certificate. The owner of the certificate can do this by themselves using the CERN Certification Authority website (<http://cernca.cern.ch/cernca>).
- If CERN Certification Authority's private key is (or suspected to be) compromised, the CA will:
 - Inform the Registration Authorities, subscribers and relying parties of which the CA is aware.
 - Terminate the certificates and CRL distribution services for certificates and CRLs issued using the compromised key.

5.7.2 Computing resources, software, and/or data are corrupted

The CERN Certification Authority operators will ensure that recovery procedures are functional and up to date. All CERN Certification Authority software and system (Virtual Server image) will be backed up after any modification.

5.7.3 Entity private key compromise procedures

In case the private key of the CERN Certification Authority is compromised, the CERN CA will:

- notify CERN RA
- make a reasonable effort to notify subscribers
- terminate issuing and distribution of certificates and CRLs
- request revocation of the compromised certificate
- generate a new CERN Certification Authority key pair and certificate and publish the certificate in the repository
- revoke all certificates signed using the compromised key
- publish the new CRL on the CERN Certification Authority repository.

5.7.4 Business continuity capabilities after a disaster

The plans for business continuity and disaster recovery for research activities and education are applicable.

5.8 CA or RA termination

Before CERN Certification Authority terminates its services, it will:

- Inform the Registration Authorities, subscribers and relying parties the CA is aware;

- Make information of its termination widely available;
- Stop issuing certificates
- Revoke all certificates
- Generate and publish CRL
- Destroy its private keys and all copies

An advance notice of at least 60 days will be given in the case of scheduled termination. The CERN CA Manager at the time of termination will be responsible for the subsequent archival of all records as required in section 5.5.2.

The CERN Certification Authority issues ONLY CRLs during its last two years (i.e. the maximal lifetime of a subscriber certificate) before the termination; this will allow subscribers' certificates to be used until they expire. In that case notice of termination is given no less than one year and 60 days prior to the actual termination, i.e. no less than 60 days before the CA ceases to issue new certificates.

6 Technical security controls

6.1 Key pair generation and installation

6.1.1 Key pair generation

- The key pair for the CERN Root Certification Authority 2 is generated by authorized CA staff on the offline CERN Root CA machine (see CERN Root Certification Authority 3 CP/CPS document).
- The keys for CERN Certification Authority are generated by software, in the CA Service.
- Each subscriber generates the key pair using a Web Browser or *OpenSSL* package⁵ (see 4.1.2).

6.1.2 Private key delivery to subscriber

Each subscriber generates the key pair using a Web Browser or OpenSSL package⁵ (see 4.1.2). The CA does not generate private keys for its subscribers and therefore does not deliver private keys to subscribers.

6.1.3 Public key delivery to certificate issuer

Subscribers' public keys are delivered through the CERN Certification Authority secure website <http://cernca.cern.ch/cernca> or through the automated interface of the CERN Certification Authority secure web application (see chapter 2).

6.1.4 CA public key delivery to relying parties

The CERN Certification Authority public key is delivered to subscribers through the secure website <http://cernca.cern.ch/cernca> (see chapter 2).

6.1.5 Key sizes

Keys of length less than 2048 bits are not accepted. The CERN Certification Authority key is 4096 bits long.

6.1.6 Public key parameters generation and quality checking

No stipulation.

6.1.7 Key usage purposes (as per X.509 v3 key usage field)

The keys may be used according to the type of certificate:

- With an end-entity certificate for
 - authentication
 - non-repudiation
 - data and key encipherment
 - message integrity
 - session establishment
 - proxy creation and signing

- With an RA certificate (certificate issued to Registration Authority) for
 - some activities needed for the work of an RA agent
- With the CA certificate
 - certificate signing
 - CRL signing

The CA's private key is the only key that can be used for signing certificates and CRLs.

6.2 Private Key Protection and Cryptographic Module Engineering Controls

6.2.1 Cryptographic module standards and controls

No stipulation.

6.2.2 Private key (n out of m) multi-person control

No stipulation.

6.2.3 Private key escrow

Private keys must not be escrowed.

6.2.4 Private key backup

The private key is backed up on a Removable Media (USB), and stored in a safe location.

6.2.5 Private key archival

Private key archival is not supported.

6.2.6 Private key transfer into or from a cryptographic module

No stipulation.

6.2.7 Private key storage on cryptographic module

No stipulation.

6.2.8 Method of activating private key

No stipulation.

6.2.9 Method of deactivating private key

No stipulation.

6.2.10 Method of destroying private key

No stipulation.

6.2.11 Cryptographic Module Rating

No stipulation.

6.3 Other aspects of key pair management

6.3.1 Public key archival

Public key archival is not supported.

6.3.2 Certificate operational periods and key pair usage periods

The CERN Certification Authority Certificate has a validity period of 10 years.

The validity of end entity certificates depends on the certificate type and is detailed in section 10 of this document.

6.4 Activation data

6.4.1 Activation data generation and installation

The private key is protected by a strong password.

6.4.2 Activation data protection

Only CERN CA Staff are allowed and can activate the CA private key.

6.4.3 Other aspects of activation data

No stipulation.

6.5 Computer security controls

6.5.1 Specific computer security technical requirements

The server hosting CERN Certification Authority is running Microsoft Windows 2022 Enterprise Edition and Microsoft Certificate Services. No other services or software are loaded or operated on this server. The server will receive occasional patches and other adjustments by the CERN CA Managers or authorized CERN Staff.

6.5.2 Computer security rating

No stipulation.

6.6 Life cycle technical controls

6.6.1 System development controls

No stipulation.

6.6.2 Security management controls

No stipulation.

6.6.3 Life cycle security controls

No stipulation.

6.7 Network security controls

The CERN Root Certification Authority 2 is offline, and must not be connected to any computer network under any circumstances (see CERN Root CA CP/CPS document).

The CERN issuing CA Frontend contains the CA website and CA secure web application. It is connected to CERN network, and is protected by CERN Firewall, configured and maintained according to the recommendations of the CERN Security team, for protection from off-site

sources. It is also protected by its own software Firewall (Microsoft Windows 2022 firewall) for protection against CERN network sources.

The CERN Issuing CA backend contains the CA service, and is connected with a private network to a Hardware Security Module (see 6.2) in the case of the Grid Certificate Authority. It is directly connected to the Frontend, and has no direct connection to CERN network. The Security Module has a local network address, is connected to CERN Issuing CA backend only and can't be accessed from CERN or external network. Operations available for CERN Issuing CA backend are only limited to signing operations. Administrative operations on Hardware Security Module can only be performed by CERN CA managers directly during physical interaction (i.e. connection of a display and a keyboard) with the Hardware Security Module.

6.8 Time-stamping

All time stamping of entries created on the online servers at the CERN CA is based on the network time provided by the time servers of CERN, which are synchronized with *Navstar Global Positioning System* (GPS).

7 Certificate, CRL, and OCSP profiles

7.1 Certificate profile

All certificates issued by CERN CA conform to the Internet PKI profile (PKIX) for X.509 certificates as defined by RFC 3280.

7.1.1 Version number(s)

Only X.509 version 3 certificates are issued by CERN Certification Authority.

7.1.2 Certificate extensions

The extensions to the X.509 v3 certificate that shall be present in CERN Certification Authority certificates are:

For natural person and robot certificates:

- Subject Key Identifier: hash
- Authority Key Identifier: keyid
- Key Usage (critical): Digital Signature, Key Encipherment
- Enhanced Key Usage: Encrypting File System (1.3.6.1.4.1.311.10.3.4), Secure Email (1.3.6.1.5.5.7.3.4), Client Authentication (1.3.6.1.5.5.7.3.2)
- CRL Distribution Points: ldap URI and http URI.
- Certificate Policies: OID of this CP (see 7.1.6) and OID of the Authentication Profile for Classic X.509 Public Key Certification Authorities with secured infrastructure⁷
- Subject Alternative Name: RFC822 Name (email address), Principal Name (CERN login, i.e. login@cern.ch)

For host certificates:

- Subject Key Identifier: hash
- Authority Key Identifier: keyid
- Key Usage (critical): Digital Signature, Key Encipherment
- Extended Key Usage: Server Authentication (1.3.6.1.5.5.7.3.1)
- CRL Distribution Points: ldap URI and http URI.
- Certificate Policies: OID of this CP (see 7.1.6) and OID of the Authentication Profile for Classic X.509 Public Key Certification Authorities with secured infrastructure⁸
- Subject Alternative Name: DNSName(s).

For CA certificates:

- Basic Constraints: critical ca: true;
- Subject Key Identifier: hash
- Authority Key Identifier: keyid
- Key Usage: critical, digitalSignature, nonRepudiation, KeyCertSign, cRLSign
- Extended Key Usage timeStamping
- CRL Distribution Points: ldap URI and http URI.
- Certificate Policies: OID

7.1.3 Algorithm object identifiers

The OIDs for algorithms used for signatures of certificates issued by CERN Certification Authority are according to:

- hash function: sha512 2.16.840.1.101.3.4.2.3
- encryption: rsaEncryption 1.2.840.113549.1.1.1
- signature: sha512RSA 1.2.840.113549.1.1.13

7.1.4 Name forms

Each entity issued by CERN Certification Authority has a unique and unambiguous Distinguished Name (DN). CERN CA prefers that organizations use domain component naming.

- Issuer subject:
 - CN=CERN Grid Certification Authority,DC=cern,DC=ch
- End Entity Subject:
 - CN=FullName,CN=id,CN=login,OU=Users,OU=Organic Units,DC=cern,DC=ch
 - CN=FQDN,OU=Computers,DC=cern,DC=ch

7.1.5 Name constraints

There are no other name constraints than those that are to be derived from the stipulations in 7.1.4, 3.1.1 and 3.1.2.

7.1.6 Certificate policy object identifier

The OID of this CP is: 1.3.6.1.4.1.96.10.10.2.1.1.0

7.1.7 Usage of Policy Constraints extension

No stipulation.

7.1.8 Policy qualifiers syntax and semantics

No stipulation.

7.1.9 Processing semantics for the critical Certificate Policies extension

No stipulation.

7.2 CRL profile

7.2.1 Version number(s)

CERN Certification Authority creates and publishes X.509 v2 CRLs signed with SHA-256 algorithm.

7.2.2 CRL and CRL entry extensions

CERN Certification Authority issues complete CRLs for all certificates issued by itself. The CRL includes the date by which the next CRL shall be issued. A new CRL must be issued before this date if new revocations are issued.

The CRL extensions that shall be included are:

- The Authority Key Identifier
- The CRL Number

The CRL entry extensions that will be included are:

- CRL Reason Code
- Invalidity Date

7.3 OCSP profile

7.3.1 OCSP Version

The OCSP service is provided through the Microsoft Online Responder and Web Proxy Cache services, standard components of Microsoft's PKI infrastructure in Windows Server 2022.

8 Compliance audit and other assessments

8.1 Frequency or circumstances of assessment

CERN Certification Authority shall make at least once a year a self-assessment to check the compliance of the operation with the CP/CPS document in effect.

The CA shall at least once a year assess the compliance of the procedures of each RA with the CP/CPS document in effect.

8.2 Identity/qualifications of assessor

No stipulation.

8.3 Assessor's relationship to assessed entity

The assessments are made by personnel of CERN CA or members of the CERN community. An external audit can be performed by any academic institution or relying party. If other trusted CAs or relying parties request an external assessment, the costs of the assessment must be paid by the requesting party, except for the costs of CERN CA personnel and infrastructure.

8.4 Topics covered by assessment

The audit will verify that the services provided by the CA comply with the latest approved version of the CP/CPS.

8.5 Actions taken as a result of deficiency

In case of a deficiency, the CERN CA responsible will announce the steps that will be taken to remedy the deficiency, including a timetable. If a discovered deficiency has direct consequences on the reliability of the certification process, the certificates (suspected to be) issued under the influence of this problem shall be revoked immediately.

8.6 Communication of results

The CERN CA staff will make the result publicly available on the CERN CA web site with all relevant details.

9 Other business and legal matters

9.1 Fees

No fees are charged for the CERN Certification Authority certification service and therefore there are no financial encumbrances.

9.1.1 Certificate issuance or renewal fees

See 9.1.

9.1.2 Certificate access fees

See 9.1.

9.1.3 Revocation or status information access fees

See 9.1.

9.1.4 Fees for other services

See 9.1.

9.1.5 Refund policy

See 9.1.

9.2 Financial responsibility

No Financial responsibility is accepted for certificates issued under this policy.

9.2.1 Insurance coverage

No stipulation.

9.2.2 Other assets

No stipulation.

9.2.3 Insurance or warranty coverage for end-entities

No stipulation.

9.3 Confidentiality of business information

9.3.1 Scope of confidential information

No stipulation.

9.3.2 Information not within the scope of confidential information

No stipulation.

9.3.3 Responsibility to protect confidential information

No stipulation.

9.4 Privacy of personal information

9.4.1 Privacy plan

CERN Certification Authority does not retain any specific private information. All required information is taken from CERN central registration databases, therefore CERN User services privacy plan applies.

9.4.2 Information treated as private

See 9.4.1.

9.4.3 Information not deemed private

See 9.4.1.

9.4.4 Responsibility to protect private information

See 9.4.1.

9.4.5 Notice and consent to use private information

See 9.4.1.

9.4.6 Disclosure pursuant to judicial or administrative process

See 9.4.1.

9.4.7 Other information disclosure circumstances

See 9.4.1.

9.5 Intellectual property rights

CERN Certification Authority does not claim any intellectual property rights on certificates which are issued.

Parts of this document are inspired or even copied (in no particular order) from the CNRS, the Baltic Grid, pkIRISGrid, SWITCH and may indirectly derive from documents they draw from.

Anybody may freely copy from any version of the CERN Certification Authority's Certificate Policy and Certification Practices Statement provided they include an acknowledgment of the source.

9.6 Representations and warranties

9.6.1 CA representations and warranties

No stipulation.

9.6.2 RA representations and warranties

No stipulation.

9.6.3 Subscriber representations and warranties

No stipulation.

9.6.4 Relying party representations and warranties

No stipulation.

9.6.5 Representations and warranties of other participants

No stipulation.

9.7 Disclaimers of warranties

CERN Certification Authority uses software and procedures for the authentication of entities that, to the best of its knowledge, perform as required by this CP/CPS document. However it declines any warranty as to their full correctness. Also CERN Certification Authority cannot be held responsible for any misuse of its certificate by a subscriber or any other party who

got in possession of the corresponding private key, and of any unchecked acceptance of any of its certificates by a relying party.

Any relying party that accepts a certificate for any usage for which it was not issued does so on its own risk and responsibility.

9.8 Limitations of liability

CERN Certification Authority declines any liability for damages incurred by a relying party accepting one of its certificates, or by a subscriber whose valid certificate is refused or whose revoked certificate is unduly accepted by a relying party.

It also declines any liability for damages arising from the non-issuance of a requested certificate, or for the revocation of a certificate initiated by the CA or the appropriate RA acting in conformance with this CP/CPS.

9.9 Indemnities

CERN Certification Authority declines any payment of indemnities for damages arising from the use or rejection of certificates it issues.

End entities shall indemnify and hold harmless CERN Certification Authority and all appropriate RAs operating under this CP/CPS against all claims and settlements resulting from fraudulent information provided with the certificate application, and the use and acceptance of a certificate which violates the provisions of this CP/CPS document.

9.10 Term and termination

9.10.1 Term

This document becomes effective after its publication on the Web site of the CERN Certification Authority starting at the date announced there.

No term is set for its expiration.

9.10.2 Termination

This CP/CPS remains effective until it is superseded by a newer version.

9.10.3 Effect of termination and survival

Its text shall remain available for at least 5 years after the last certificate issued under this CP/CPS expires or is revoked.

9.11 Individual notices and communications with participants

All e-mail communications between the CA and its accredited RAs must be signed with a certified key.

All e-mail communications between the CA or an RA and a subscriber must be signed with a certified key in order to have the value of a proof. All requests for any action must be signed.

9.12 Amendments

9.12.1 Procedure for amendment

Amendments to this CP/CPS must undergo the same procedures as for the initial approval (see 1.5.4). Rephrasing provisions to improve their understandability as well as pure spelling corrections are not considered amendments.

9.12.2 Notification mechanism and period

The amended CP/CPS document shall be published on CERN Certification Authority Web pages at least 2 weeks before it becomes effective.

CERN Certification Authority will inform its subscribers and all relying parties it knows of by means of an e-mail.

9.12.3 Circumstances under which OID must be changed

Substantial changes shall cause the OID to be changed. The decision is made by the CERN Certification Authority manager and submitted to the EUGridPMA for approval.

9.13 Dispute resolution provisions

Disputes arising out of the CP/CPS shall be resolved by the CERN CA manager.

9.14 Governing law

CERN Certification Authority and its operation are subject to the French and Swiss laws. All legal disputes arising from the content of this CP/CPS document, the operation of CERN Certification Authority and its accredited RAs, the use of their services, the acceptance and use of any certificate issued by CERN Certification Authority shall be treated according to French and Swiss laws.

9.15 Compliance with applicable law

All activities relating to the request, issuance, use or acceptance of a CERN Certification Authority certificate must comply with the French and Swiss laws.

Activities initiated from or destined for another country than France or Switzerland must also comply with that country's law.

9.16 Miscellaneous provisions

9.16.1 Entire agreement

This CP/CPS document supersedes any prior agreements, written or oral, between the parties covered by this present document.

9.16.2 Assignment

No provisions.

9.16.3 Severability

Should a clause of the present CP/CPS document become void because it is conflicting with the governing law (see 9.14) or because it has been declared invalid or unenforceable by a court or other law-enforcing entity, this clause shall become void (and should be replaced as soon as possible by a conforming clause), but the remainder of this document shall remain in force.

9.16.4 Enforcement (attorneys' fees and waiver of rights)

No stipulation.

9.16.5 Force Majeure

Events that are outside the control of CERN Certification Authority will be dealt with immediately by the EUGridPMA.

9.17 Other provisions

No stipulation.

10 Types of Certificates Issued by the CERN CA

This section describes the types of certificates issued by the CERN Certification Authority.

10.1 Certificates for General Usage

This section describes the types of certificate for general usage, i.e. user or host certificates that can be requested by any CERN user or categories of CERN users.

10.1.1 EESmartCard User

End entity type	User
Usage	SmartCard
Enrollment method	SmartCard activation station.
Permissions	CERN users.
DN format	LDAP DN of the subject.
SANs	Email and UPN of the subject.
Validity	6 months.

10.1.2 CERN Host Certificate 2 Years

End entity type	Host
Usage	Client and Server authentication
Enrollment method	Autoenrollment. Autoenrollment can be configured using the Certification Authority website. Additional configuration on the machine could be necessary, according to the OS installed.
Permissions	A person responsible for the machine can configure the machine for autoenrollment.
DN format	CN={cn} The cn field is the LDAP Common Name of the machine. The Common Name is used instead of the full DN because the machine object in LDAP can be moved to a different OU.
SANs	Values defined in cernSan1-3 LDAP properties.

	SANs can be configured using the Certification Authority website.
Validity	765 days

10.1.3 CERN EduRoam Certificate

End entity type	User
Usage	Access to the EduRoam network (https://www.eduroam.org/).
Enrollment method	Certification Authority website.
Permissions	CERN Employees and CERN Researchers.
DN format	CN={cn}-eduroam@cern.ch The <i>cn</i> field is the Common Name property of the user in LDAP. The CN format is chosen in a way to avoid name clashes with real objects in LDAP.
SANs	UPN of the subject.
Validity	400 days.

10.1.4 CERN Code Signing Certificate

End entity type	User
Usage	Code signing.
Enrollment method	Certification Authority website.
Permissions	Code Signing certificates can only be requested by Service Accounts. The requesting account must have a meaningful display name, which allows to identify which group or team at CERN is responsible for the development of the signed software. The display name of the service account must not be refer to the account's owner or to a single person. Service accounts can be authorized to request code signing certificates from the CERN Certification Authority web site.

DN format	<code>cn={displayName},cn={cn},ou=Users,ou=Organic Units,dc=cern,dc=ch</code> The <i>displayName</i> field is the Display Name property of the user in LDAP. The <i>cn</i> field is the Common Name property of the user in LDAP. The DN format is chosen in this way because the first DN component is what is displayed by most applications as signer of the certificate.
SANs	Email and UPN of the subject.
Validity	765 days.

10.2 Certificates for Specific Usage

This section describes types of certificate for specific usages, i.e. certificates that can be requested only by system administrators or that are required only by a specific application.

10.2.1 Domain Controller Certificate

End entity type	Host (Domain Controller)
Usage	Domain Controller authentication
Enrollment method	Autoenrollment As these certificates are not of general interest, no web interface is provided for this certificate template.
Permissions	Only Domain Controllers can request this type of certificate
DN format	LDAP DN of the machine
SANs	Values defined in <code>cernSan1-3</code> LDAP properties The SANs values are expected to be in DNS format, and should match the DC aliases (e.g. <code>cerndc.cern.ch</code>, <code>bedc.cern.ch</code>) that apply to the machine. SAN values are edited in LDAP by Domain Administrators.
Validity	1 year (system default).

10.2.2 CERN STS User Certificate

End entity type	User
Usage	Grid Security Token Service
Enrollment method	Web service https://cernca.cern.ch/cernca-services/sts/Sts.asmx
Permissions	Service accounts that need to invoke the web service.
DN format	CN= <i>login</i> , O= <i>domain</i> , DC=sts, DC=grid The <i>login</i> value must be an alphanumeric identifier for the subject. The <i>domain</i> value must be an alphanumeric identifier for the subject's domain, and is used to avoid name clashes. The fixed DC parts are used to avoid name clashes with existing institutions.
SANs	Not allowed.
Validity	2 weeks.

10.2.3 CERN Enrollment Agent

End entity type	User
Usage	Self-service smartcard certificate station.
Enrollment method	Manual request submission to the Certification Authority.
Permissions	Certification Authority administrators.
DN format	LDAP DN of the subject.
SANs	Not allowed.
Validity	5 years.
